Evaluation of the damage caused by the spotted-wing fly (Drosophila suzukii) on grapes (Harvest 2016)

Dear Producers,

In 2015, Agroscope in collaboration with the cantonal services sent a survey to producers concerning the spotted-wing fly. The survey provided important insights for research, extension services and agricultural practices. The survey is now repeated for the harvest 2016. Its objectives are to evaluate the losses caused by spotted-wing fly and the different measures taken in practice. If your grapes are not affected by the spotted-wing fly, please note that your participation in this survey is of great importance to have representative and conclusive results.

Below you will find questions about the following areas:

- Varieties of grapes and surfaces
- Assessment of damage
- Measures taken against the insect
- Operational information
- Operations Manager Information

The survey takes about 25 minutes.

Naturally, your information will be treated confidentially and all data will be anonymous.

To thank you for your participation, you will receive, if you wish, an individual evaluation of the results. In addition, we invite you to participate in the draw of 4 SBB vouchers worth CHF 50 each.

We thank you in advance for your cooperation and we invite you to contact us for any additional information!

Esther Bravin (Agroscope), Ladina Knapp (ETH Zürich)
