# Research Data Management – A (pretty) short overview

Dr. Malin Ziehmer

# What is data management and why does it concern you?

# The data life cycle

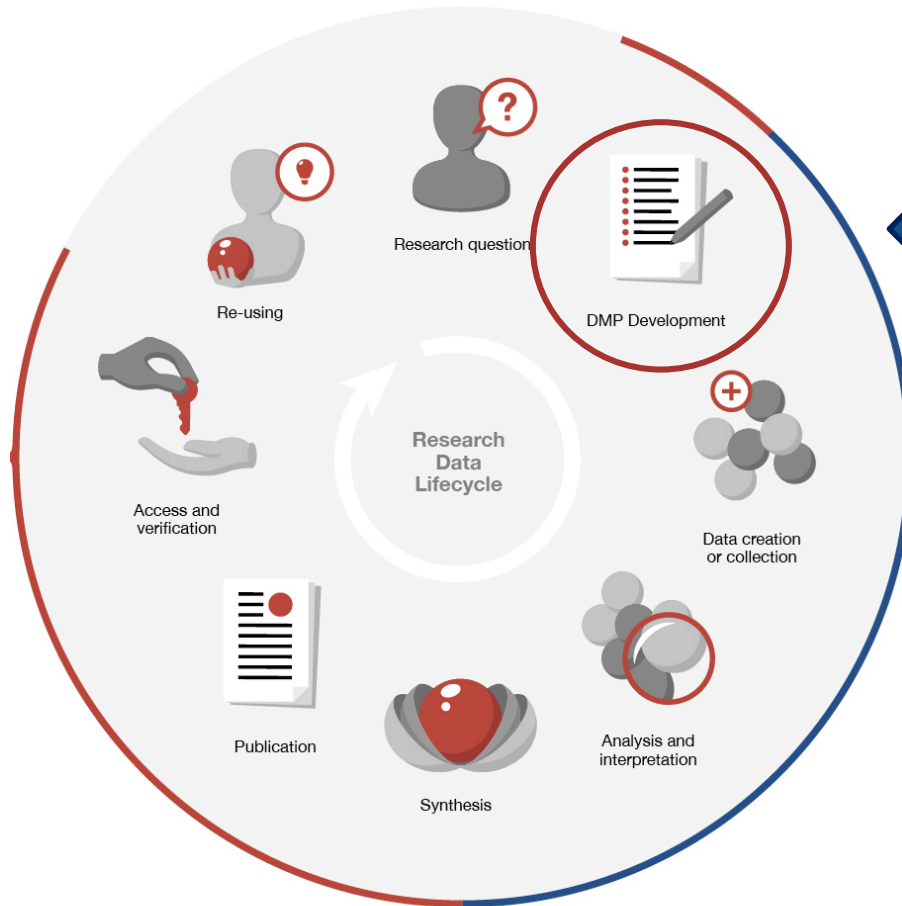

# The data life cycle

**Publication and preservation:** annotate, share, publish, preserve data at the end of the project/publication

Research Support Services

- Publication services
- Preservation services
- Training and consulting

**Active data management:** annotate, store, backup data while it is produced

Scientific IT Services

- Active research data management services
- Soft- and hardware
- Training and consulting

# Regulations, intellectual property, privacy, and access rights

An overview

# What you (should have) received...

...at the beginning of

- your studies
- your PhD
- your employment

at ETH Zurich

## ... and what they state...

- [...] all ETH members [...] are required to integrate the general conditions and internal directives into the work process.
- In the research context, **the project manager plays an active role in guiding and monitoring junior scientists**. In particular, he or she is responsible for making sure that everyone involved in the project is aware of the research integrity guidelines.
- Junior scientists are given **appropriate guidance**.
- **Primary data is carefully archived**.
- At the ETH Zurich research is founded on intellectual honesty. Researchers [...] are committed to scientific integrity and truthfulness in research and peer review.
- For research data, see Art. 11, in particular.

<https://rechtssammlung.sp.ethz.ch/Dokumente/133en.pdf>

<https://doi.org/10.3929/ethz-b-000179298>

# Roles and responsibilities in RDM

- **Project Members:**
  - **adhere to the principles of good scientific practice** and the guidelines for Research Integrity at ETH.
  - All steps of treatment of primary data must be **documented in a form appropriate to the discipline** and results must be **reproducible**.
- **Project Manager:**
  - responsible for **data management** (data collection, storage, data access, compliance with data protection requirements, **retention for the period prescribed by the discipline ...**).
  - **Ensures that all** research project participants **are aware of the guidelines**.
  - Determines together with the professor, **which departed project members should retain access** to the primary data or materials.

# Cloud Computing@ ETH Zurich

## Rules and Regulations

- The removal of sensitive data from ETH Zurich (e.g. research data subject to contractual confidentiality with third parties, important ETH Zurich business data such as financial data, personal employee or student data, reports) is not permitted. **ETH Zurich must retain access to and control over such data at all times.**
- **The use of cloud and social media services** (e.g. Facebook, Google, Dropbox) in research, for exchange with researchers at other universities, or in teaching for exchange with students (lecture folders, etc.) **is permitted as long as no sensitive ETH Zurich data are affected and no third party rights**, in particular privacy or intellectual property rights, **are infringed.**

[https://itsecurity.ethz.ch/leaflet\\_example\\_cloud\\_EN.pdf](https://itsecurity.ethz.ch/leaflet_example_cloud_EN.pdf)

# Privacy

- People-related data need to be preserved according to **Swiss data protection law**

Federal Act on Research involving Human Beings

(<https://www.admin.ch/opc/en/classified-compilation/20061313/index.html>)

Federal Act on Data Protection (<https://www.admin.ch/opc/en/classified-compilation/19920153/index.html>)

Swiss Criminal Code (<https://www.admin.ch/opc/en/classified-compilation/19370083/index.html>)

- Appropriate **anonymization** might be required
- The **deletion** of individual datasets must be possible at all times
- The study subjects need to sign a **declaration of consent**
- More information: ETH Zürich **Ethikkommission** (German):  
<https://www.ethz.ch/services/de/organisation/gremien-gruppen-kommissionen/ethikkommission.html>

© Hea Poh Lin from Noun Project

# Intellectual Property Rights: What you need to consider

## For publications and for data!

- **Respect the rights of others**
  - Third parties
  - Individuals you work with
- In case of doubt: **seek permission** even when a CC-licence is assigned
- Note that according to ETH law, **ETH reserves most immaterial rights** in works by its employees. When in doubt, contact ETH transfer early ([www.transfer.ethz.ch](http://www.transfer.ethz.ch))
- Make sure you **keep sufficient rights**
  - E.g. for Open Access Publishing (green path)
  - E.g. with respect to patent applications: ETH transfer early ([www.transfer.ethz.ch](http://www.transfer.ethz.ch))

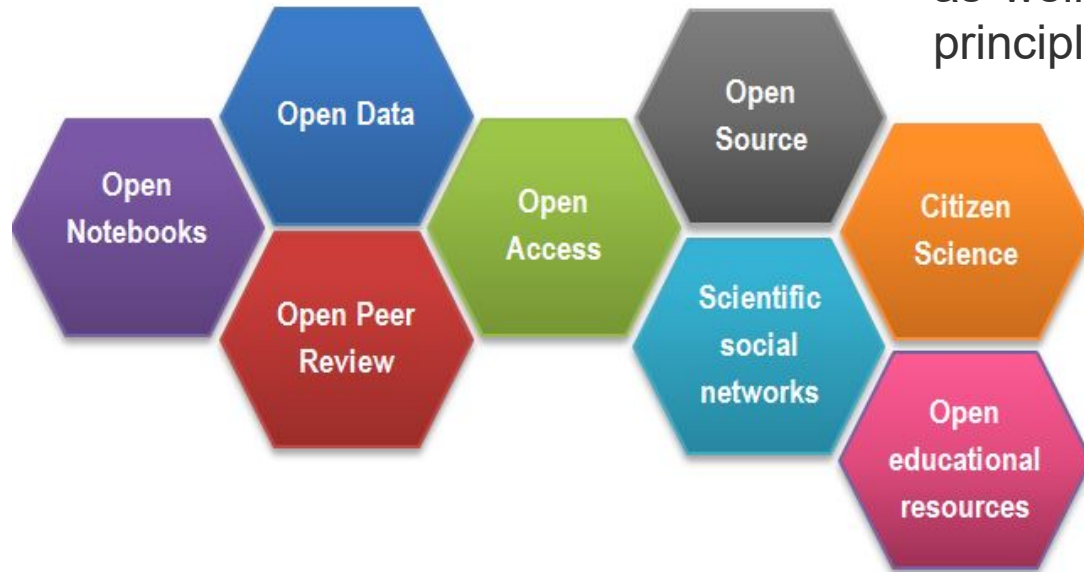

# Short excursion: Open Science

## Short Excursion: Open Science (OS)

“Open Science is the **umbrella term** for all efforts aimed at **achieving more openness in science** and the necessary **paradigm shift**, e.g. **open access to publications and open data** as well as the transition towards research funding based on DORA principles.”

(SNSF, [www.snf.ch/openscience](http://www.snf.ch/openscience))

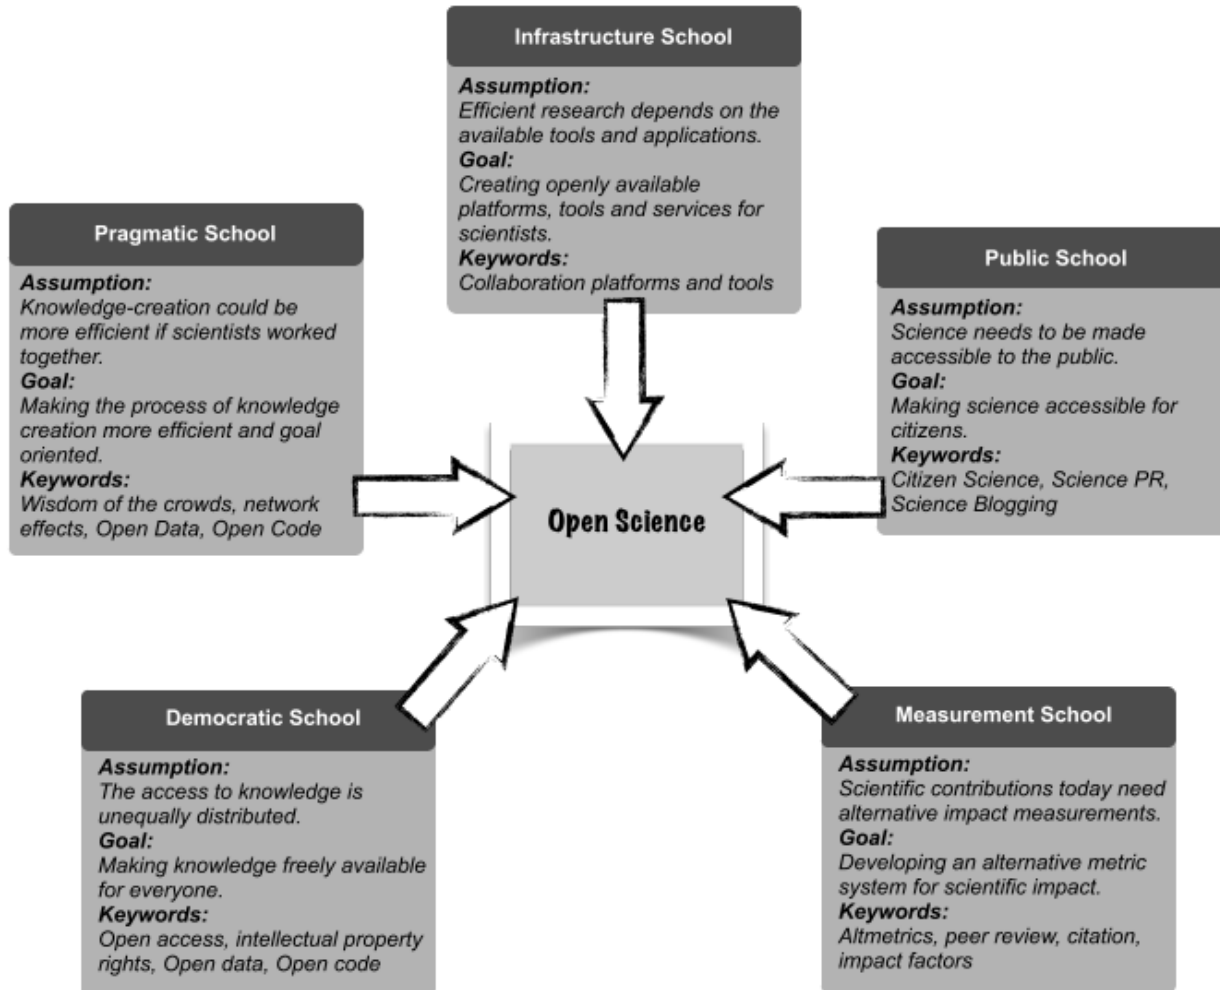

“Open Science facets as a beehive” (29.1.2019) by [fosteropenscience.eu](http://fosteropenscience.eu)

### In short:

The dissemination of scientific knowledge, that is as wide as possible, free of charges, to all users, and accessible online.

(OS MOOC, TU Delft)

# Short Excursion: Open Science (OS) Schools of Thought

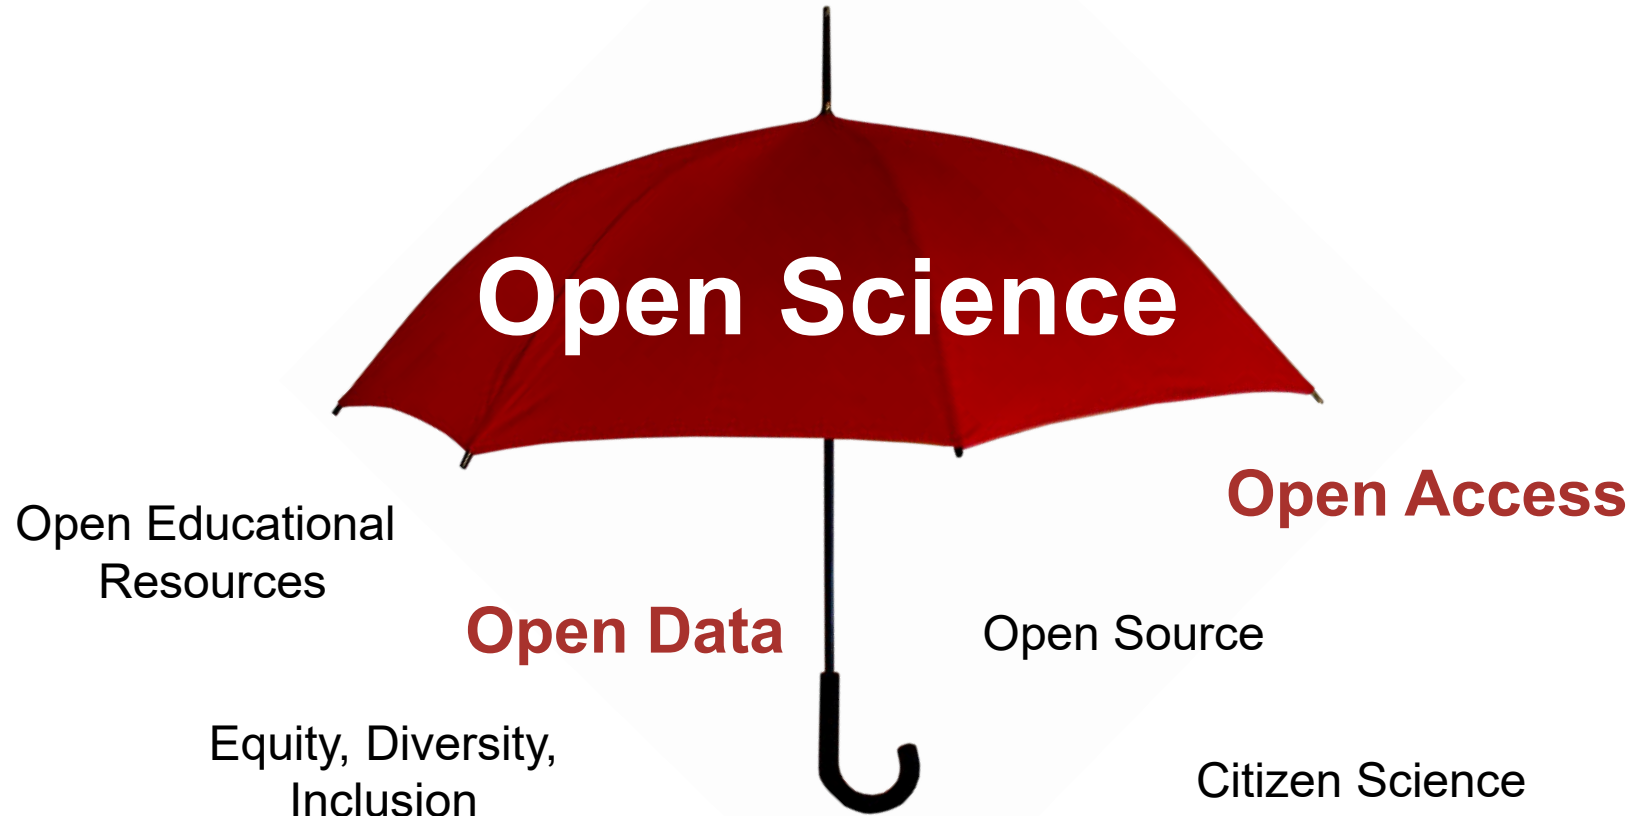

## Goals:

- Creating **openly available platforms, tools and services** for scientists
- Making science **accessible for citizens**
- Developing an **alternative metric system** for scientific impact
- Making **knowledge freely available** for everyone
- Making the process of **knowledge creation** more **efficient** and **goal-oriented**

Five Open Science schools of thought ([Fecher and Friesike, 2014](#))

# Short Excursion OS: Components of Open Science

# Open Access and Open Data

Ideally, an **open access publication** is for anyone to

- read
- download
- copy
- distribute
- print
- search for
- search within
- use in education or another way

with few legal limitations.

## Open Data

“Research data should be freely accessible to everyone – for scientists as well as for the general public.”

(SNSF, *Open Research Data Policy*)

[FAIR image](#) (4.9.2018) by Sangya Pundir / [CC BY-SA 4.0](#)

Data that is **freely** available to **everyone** to use and republish as they wish, **without restrictions** from copyright, patents or other mechanisms of control.

(OS MOOC, TU Delft)

# SNSF policy on Open Research Data

Goal of the SNSF:

**Research data should be freely accessible to everyone** – for scientists as well as for the general public.

Article 47 of the Funding Regulations

(1 Jan 2016, [http://www.snf.ch/SiteCollectionDocuments/allg\\_reglement\\_16\\_e.pdf](http://www.snf.ch/SiteCollectionDocuments/allg_reglement_16_e.pdf)):

*“[...] the data collected with the aid of an SNSF grant must also be made available to other researchers for further research and integrated into recognised scientific data pools [...]”*

→ **A data management plan** is just one of the tools to reach this goal

# Data Management Planning

What? Why? How?

# What is a Data Management Plan (DMP)?

A brief plan written at the start of a project and updated during its course to define:

- **What data** will be collected or created?
- **How** will the data be documented and described?
- **Where** will the data be stored?
- **Who** will be responsible for data security and backup?
- Which data will be **shared and/or preserved**?
- **How** will the data be shared and with whom?

DMPs are e.g. demanded by:

**SNSF since October 2017**

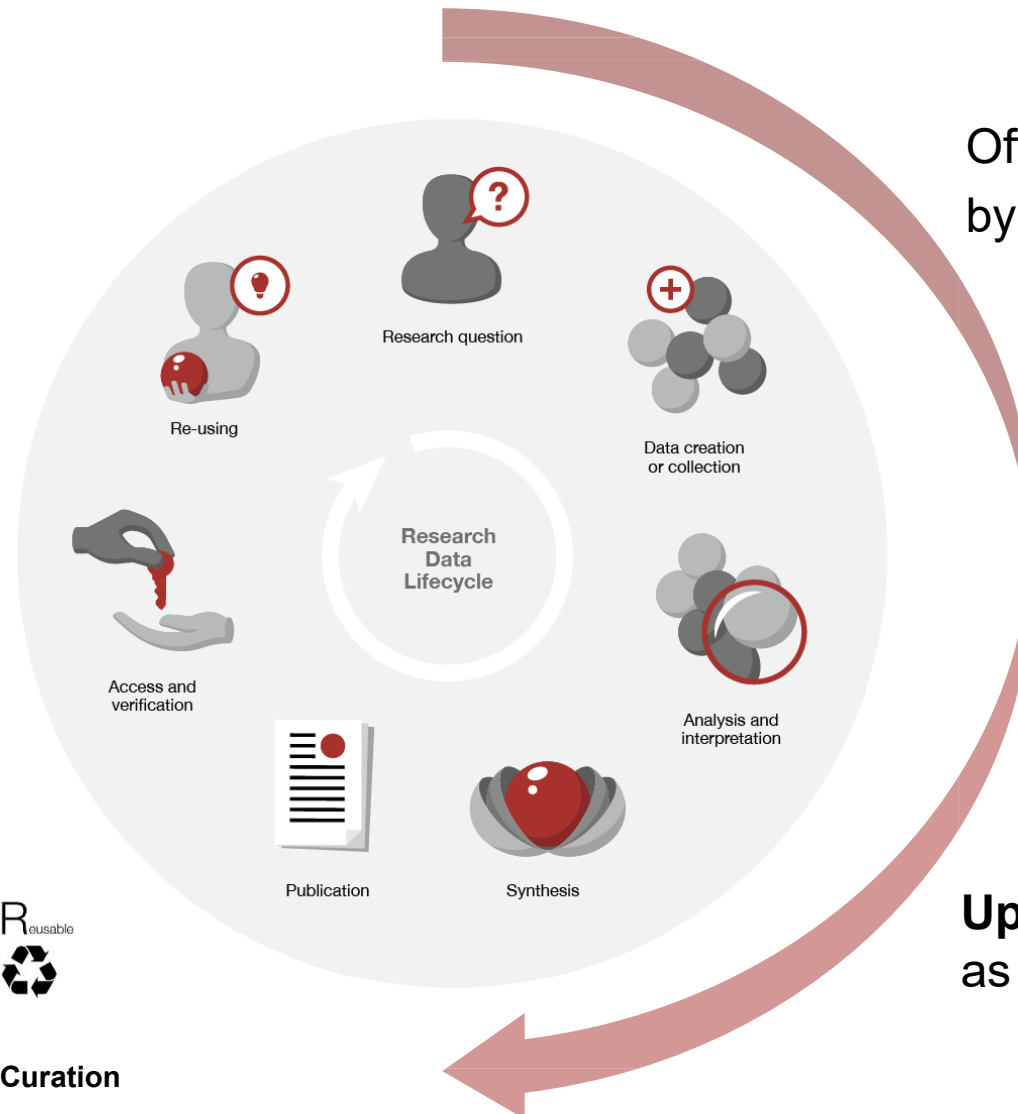

[http://www.snf.ch/en/theSNSF/research-policies/open\\_research\\_data/Pages/default.aspx](http://www.snf.ch/en/theSNSF/research-policies/open_research_data/Pages/default.aspx)

**Horizon2020 EU funding programme**

[http://ec.europa.eu/research/participants/data/ref/h2020/grants\\_manual/hi/oa\\_pilot/h2020-hi-oa-data-mgt\\_en.pdf](http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/hi/oa_pilot/h2020-hi-oa-data-mgt_en.pdf)

# Aims of the DMP according to SNSF

- **Planning and documenting the life cycle of data**
- In the ideal case, you only need to **document** your current practice / **best practice** in your field
- **Making data FAIR:**
  - Findable
  - Accessible
  - Interoperable
  - Re-usable

Offering a **long-term perspective** by outlining how the data will be:

- Generated
- Collected
- Documented
- Shared / Published
- Preserved

**Updating the plan** as the project progresses

# The FAIR data principles matrix

How do you know if your data is FAIR?

<b>F</b> indable	<p>F1. (Meta)data are assigned a globally unique and persistent identifier</p> <p>F2. Data are described with rich metadata</p> <p>F3. Metadata clearly and explicitly include the identifier of the data they describe</p> <p>F4. (Meta)data are registered or indexed in a searchable resource</p>
<b>A</b> ccessible	<p>A1. (Meta)data are retrievable by their identifier using a standardised communications protocol</p> <p>A1.1 The protocol is open, free, and universally implementable</p> <p>A1.2 The protocol allows for an authentication and authorisation procedure, where necessary</p> <p>A2. Metadata are accessible, even when the data are no longer available</p>
<b>I</b> nteroperable	<p>I1. (Meta)data use a formal, accessible, shared, and broadly applicable language for knowledge representation.</p> <p>I2. (Meta)data use vocabularies that follow FAIR principles</p> <p>I3. (Meta)data include qualified references to other (meta)data</p>
<b>R</b> eusable	<p>R1. Meta(data) are richly described with a plurality of accurate and relevant attributes</p> <p>R1.1. (Meta)data are released with a clear and accessible data usage license</p> <p>R1.2. (Meta)data are associated with detailed provenance</p> <p>R1.3. (Meta)data meet domain-relevant community standards</p>

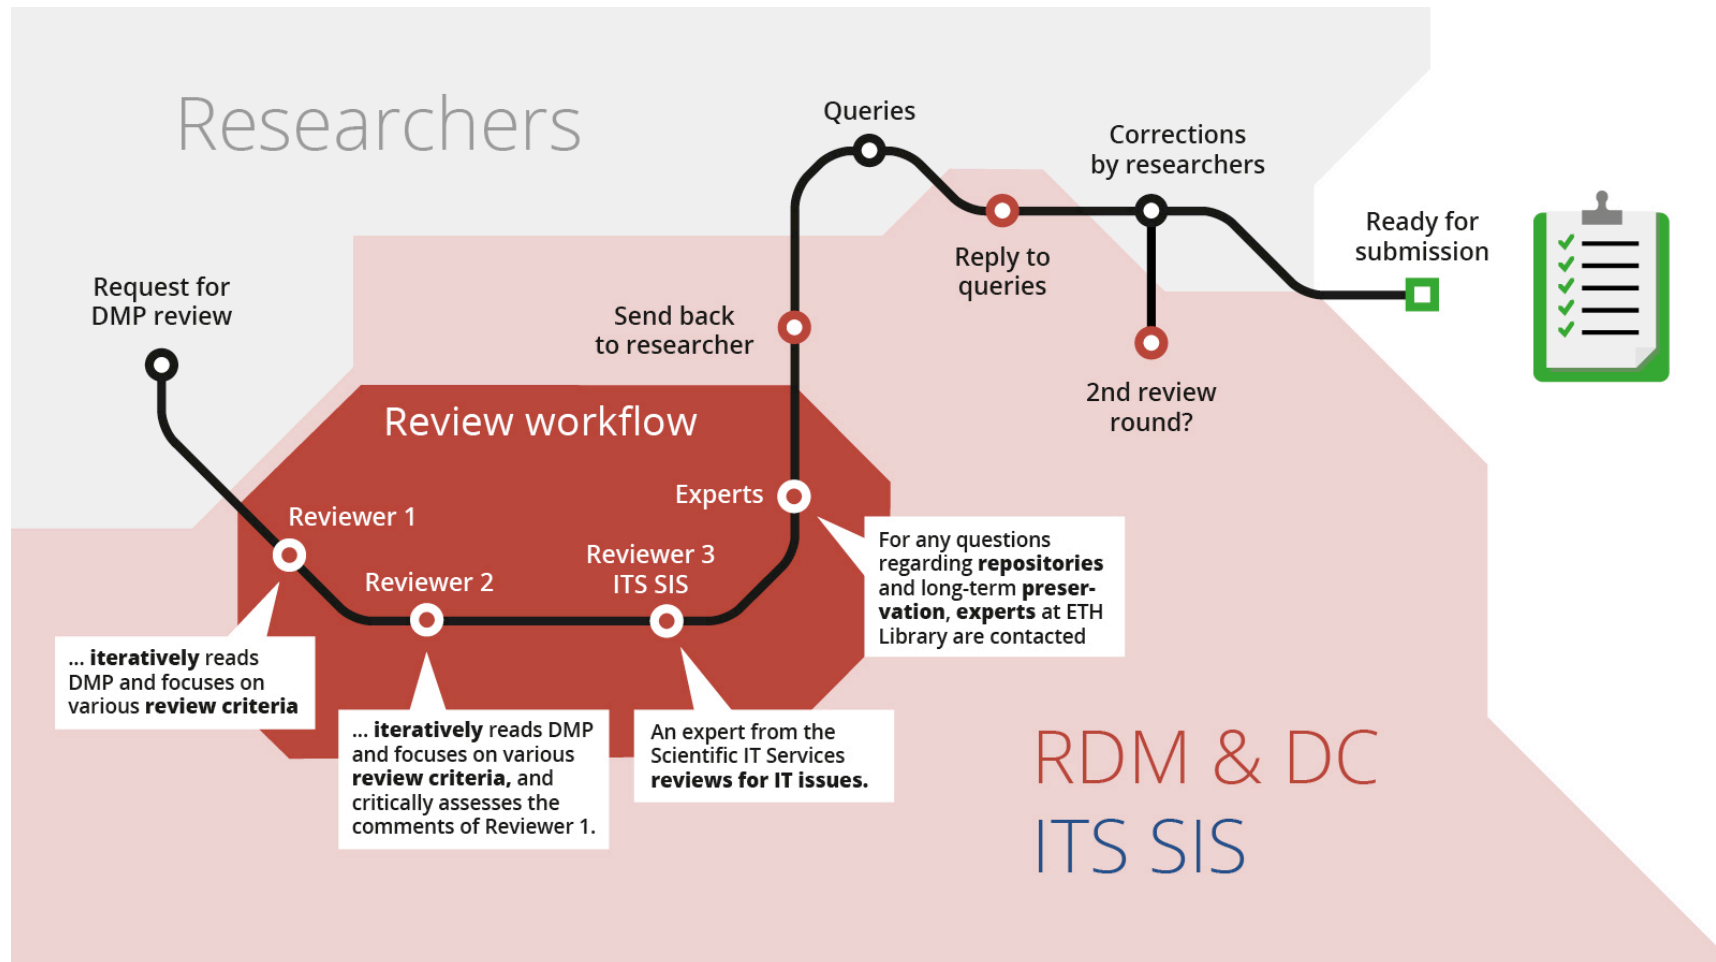

<https://www.go-fair.org/fair-principles>

# Information to support you

- Collection of **SNSF information** on Open Research Data including **FAQ**:  
[http://www.snf.ch/en/theSNSF/research-policies/open\\_research\\_data/](http://www.snf.ch/en/theSNSF/research-policies/open_research_data/)
- SNSF's explanation of the **DMP expected content**:  
[http://www.snf.ch/SiteCollectionDocuments/DMP\\_content\\_mySNF-form\\_en.pdf](http://www.snf.ch/SiteCollectionDocuments/DMP_content_mySNF-form_en.pdf)
- **Guidance for ETH researchers** on filling out SNSF Data Management Plans:  
<https://documentation.library.ethz.ch/display/DD/Guidance+for+ETH+researchers+on+filling+out+SNSF+Data+Management+Plans>
  - Includes:  
explanations per question, examples from DMPs, contacts and links specific for ETH Zurich

# We review your DMP – contact [researchdata@ethz.ch](mailto:researchdata@ethz.ch) for more

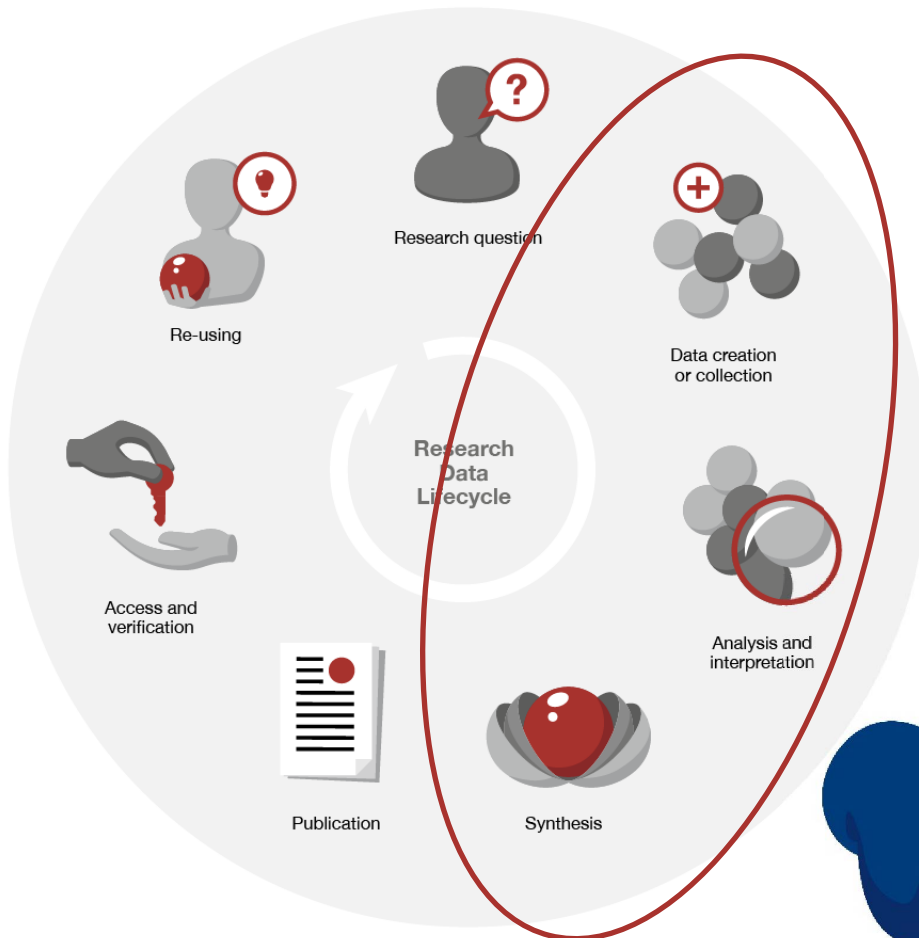

# Submission and Assessment of the DMP

- A proposal can only be submitted if a DMP was created
- A DMP for SNSF **must be created online in mySNF**
- You cannot upload a DMP created outside of mySNF – except in Lead Agency process
- The DMP is assessed by SNSF staff **for plausibility and compliance** with its Open Research Data policy
- It is **not sent to external reviewers**
- Applicants **can be assigned «tasks»** for enhancing their DMP as part of the funding decision

<https://www.mysnf.ch>

# Research Group Policy

- **Self-critical questions:**

- What must data look like to **enable us to re-use** it with scientific conviction and **trust** into its quality and correctness?
- Is this true for our own data? What is missing?

- **Tasks for group leaders (not required but recommended):**

- Agree on **binding rules**
- Define **data management responsible (DMR)** within the group
- **Discuss and document rules** (in writing) with DMR

# Data-aware workflow?

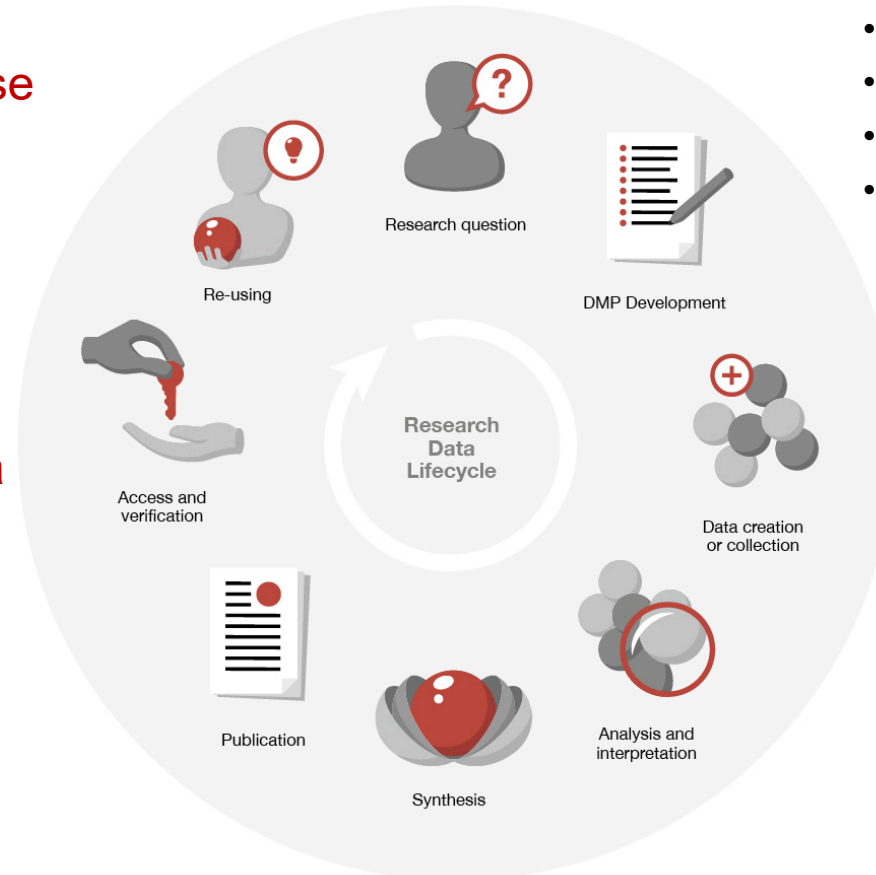

From initial idea, pre-evaluation, development to publishing

## Long-term preservation and reuse

- e.g. ETH Data Archive

## Open access publication and publication of research data in a FAIR repository

- Research Collection
- Zenodo
- etc.
- Use CC-Licenses

## Writing a DMP

- Data collection and documentation
- Ethics, legal and security issues
- Data storage and preservation
- Data sharing and reuse

## Active (daily) data management

- ELN-LIMS (e.g. openBIS, ETH RDH)
- Versioning (e.g. git)
- File formats (already consider LTP?)
- Consistent file/folder naming schemes
- Annotation and Metadata
- Backup
- Keep in mind: what would others need to reuse your data?

# Active (daily) data management

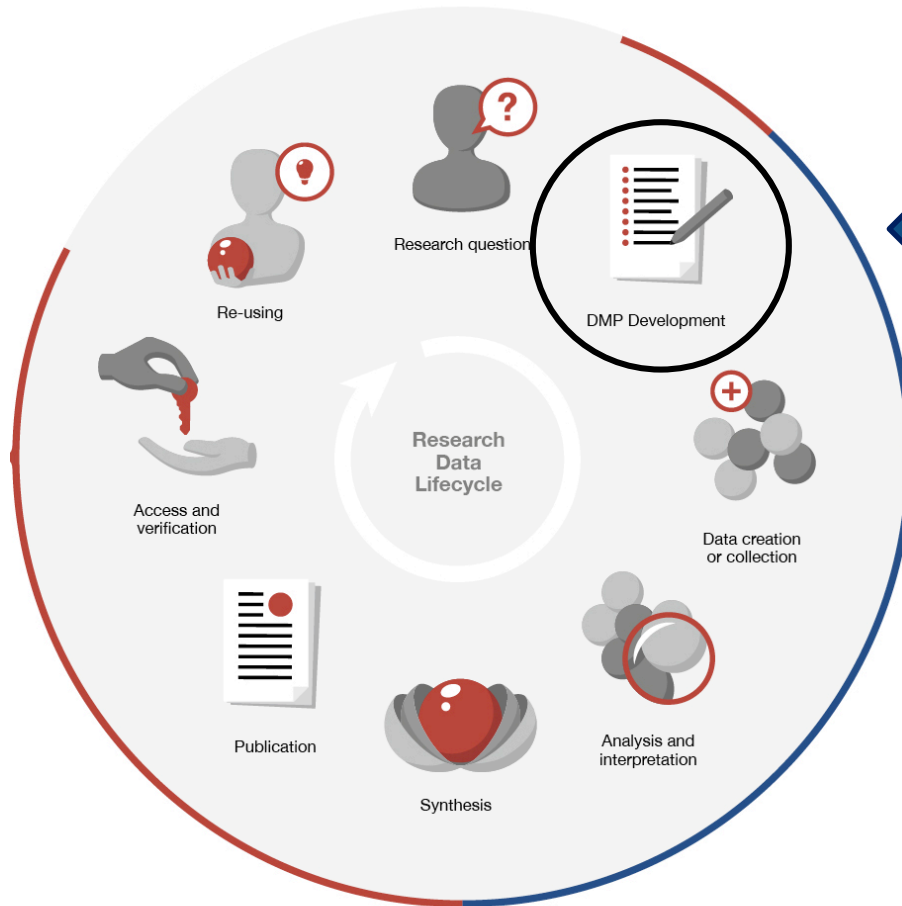

- **Git-lfs**
  - Extension for storing larger files in an efficient way in a repository
  - Versioning of code and smaller to medium size amounts of data (max. 10s – 100s of GB)
  - gitlab.ethz.ch supports git-lfs
  - Management of code and data + versioning + backup
  - e.g. SDSC uses git-lfs as data store in Renku
- **External Data Storage**
  - we recommend the ETH NAS offers
  - <https://www.ethz.ch/services/de/it-services/katalog.html>, «Storage»)
  - The use of external harddrives is not recommended
- **Cloud:**
  - Products for private end users (Dropbox, Google One etc.) → see cloud computing regulations at ETH
  - Professional (business-to-business) offers (e.g. AWS, Azure) → still under debate

# The data life cycle

**Publication and preservation:** annotate, share, publish, preserve data at the end of the project/publication

Research Support Services

- Publication services
- Preservation services
- Training and consulting

**Active data management:** annotate, store, backup data while it is produced

Scientific IT Services

- Active research data management services
- Soft- and hardware
- Training and consulting

# Why spend time and effort on this?

## Benefits

Preserve non replicable data

Raise your impact by citable data

Avoid redundant data creation

Facilitate collaboration

Enable data reuse and sharing

Highlight patterns or connections that might otherwise be missed

## Duties

Meet funders' and institutional requirements (SNSF, EU Horizon)

Keep work in accordance with good scientific practice: transparent and valid

Take part in the discussion with your community, institutions and funders
